Exhibit A

Re: Soil Erosion and Sediment Control Measures

Builders and all those involved in home construction at the Jewel will be required to adhere to the measures set forth in this Memorandum. No home plan will be approved by the Jewel ACC before the builder executes this Memorandum and the Escrow Deposit Agreements described herein and attached hereto.

The Soil Erosion and Sediment Control Measures that are required of all builders are:

1. **An approved Storm water Pollution Prevention Plan**, including an erosion and sediment control plan, will be required on all home construction projects within The Residences at the Jewel. A copy of the NPDES permit transfer/subdivision registration application and actual permit shall be on file and become a permanent part of the SWPPP.
2. **Install silt fences/perimeter controls** along all down gradient slopes prior to all construction activity.
3. **Catch basin inlets** in the immediate vicinity of home construction shall be lined with monofilament filter fabric, or other approved inlet protection, before any excavation begins.
4. **Monitor and maintain all erosion control measures** such as silt fences and lined catch basins especially following all rain events and no less than once every seven days. Remove sediment if deposits reach 1/3 of the silt fence height. If structures are found to be inadequate or damaged they will be required to be replaced or repaired within 24 hours.
5. **All stockpiles will be placed no closer than 3 feet from the curb** and maintained while onsite.
6. **Install silt fence around all non-aggregate stockpiles** (even if it will be used for backfill) on home construction sites on the day the pile is created; and seed and mulch if the pile will not be moved within the following times: 3 days for slopes that are 3:1 or greater and 7 days for slopes that are 3:1 and flatter.
7. **Provide and maintain a 12' x 50' (or to front of garage door) x 6" deep gravel construction entrance** on the lot at all times during the construction

period until the permanent driveway is poured. Gravel should be 1.5 – 3 inches. Plan ahead for winter; suggested alternatives are welcome.

8. **Dirt that is tracked on** to pavement shall be removed immediately upon discovery to prevent sediment from entering storm drains. An inspection of the pavement adjacent to the site, and removal of any dirt, shall be performed daily.
9. **Refrain from driving or parking on any part of the lot other than the construction entrance** during muddy conditions.
10. **Refrain from entering upon any adjoining lot or Jewel land** at any time without permission from the owner (damage to the lot or Jewel land will be the builder's responsibility).
11. **Install 2 feet of sod, or other approved material, behind all curb areas** on the lot except for the construction entrance immediately after the basement is backfilled.
12. **Install gutters on all buildings** and direct roof runoff from downspouts to permanently vegetated areas. Downspout extenders may be used to direct runoff until vegetation has been established.
13. **All exposed soil areas that are not being actively worked, must have temporary erosion protection or permanent cover** within 3 days for slopes 3:1 and 7 days for slopes 3:1 or flatter. This shall apply to all exposed soil areas year round. Plan ahead for winter; suggested alternatives are welcome.
14. **All trash will be contained on site and in the appropriate waste container.** Solid waste including floating debris, paper, plastic, fabric, and other trash will be collected in designated containers at the project site. Containers will be emptied regularly and disposed of properly at an off-site waste collection facility. The contractor will provide portable toilets at the worksite to collect sanitary and septic waste during construction. Portable toilets will be emptied, cleaned, and maintained on a regular basis by the supply company and removed from the site at the completion of construction activities. Construction debris including collected sediment, concrete, millings, asphalt and scrap wood, metal and other wastes will be

collected and disposed of properly and comply with MPCA disposal requirements.

15. **Cover all dumpsters** nightly or when weather conditions warrant (e.g. windy).
16. **Discharge concrete truck wash water** only in areas designated by Jewel. Vehicle washing is not allowed. Alternative suggestions are welcome.
17. **Construction materials and supplies including but not limited to all lumber, equipment, and dumpsters will be stored on site** and not in the adjoining lots, street or sidewalks.
18. **Builders and homeowners** are urged to use and install alternative permanent storm water control measures such as rain gardens and rain barrels.
19. **On each home construction site**, the builder shall have a designated contact person to be responsible for implementing and maintaining these protective measures. All sites shall be inspected after 1/2 inch rain event and once every seven days during dry periods. These inspections shall be delivered to the Jewel Offices weekly and shall become a permanent part of the projects Storm Water Pollution Prevention Plan.
20. **Once the project is completed**, a Notice of Termination shall be submitted to the Pollution Control Agency within the terms and conditions of the requirements of the NPDES Construction Permit. This Notice of Termination shall remain a permanent part of the projects Storm water Pollution Plan. (Note the requirements for final stabilization, down gradient perimeter controls and distribution of the Homeowners Fact Sheet (Section IV.G.2, Page 18).

These measures are based on Federal and State law, the 2005 Erosion and Sediment Control Field Guide published by the Builders Association of the Twin Cities, or our experience. We understand they are more than Lake City requires, but consider them in full force and effect upon all builders at the Jewel.

These measures may be modified by The Jewel at any time upon notice to the builder.

All Builders are responsible for the actions of the people they have on site.

Escrow Deposit Agreements.

Two agreements are required, one by the City of Lake City and one by the Jewel. Each agreement requires a deposit in escrow prior to approval of any plan for home construction by the Master HOA Architectural Control Committee (ACC).

- 1. Escrow Agreement For Public Improvement Maintenance.** This escrow agreement is required by Lake City Common Council Resolution No. 04-047 passed on November 22, 2004. A \$1,000 deposit per building by the builder is required.

Any damage to the pavement, curb, sidewalks, boulevards, or other infrastructure within the public right of way caused by a builder or owner, or their contractors or subcontractors, shall be required before this deposit is refunded. To the extent such damage is not paid for by the builder or owner, funds from the deposit may be used by the City or Jewel to make these repairs.

- 2. Landscape Escrow.** The **Property Owner** must sign the Landscape Escrow Agreement and pay into the escrow a sum determined by the ACC (based on where the lot is located) which will be held until such time as the landscape has been completed according to the Landscape Plan and the ACC has approved the landscaping.

Thank you for your cooperation.
